Nathan Martinez

Software QA and Test Automation

Albuquerque, NM | (505) 355-8000 | natemtztech@gmail.com
github.com/NathanMartinez | natemtz.dev

PROFESSIONAL SUMMARY

Software QA professional and developer with experience testing POS, inventory, payment, API, and database workflows. Led QA for Lavu Inventory 2.0, investigated integration defects, and contributed to release readiness. Recent work includes automated tests for TypeScript tooling and three merged Chora contributions, backed by physical Android TV validation. Technical support experience strengthens reproducible troubleshooting and cross-team defect resolution.

TECHNICAL SKILLS

Testing: manual test design, regression, smoke, integration, end-to-end, API and database testing, defect triage, release validation
Development and tools: TypeScript, JavaScript, Bun test runner, SQL/MySQL, Postman, Git, GitHub, GitHub Actions, Bitbucket, Jira, Confluence, Xcode, TestFlight
Environments: Windows, Linux, macOS, iOS/iPadOS, Android TV; existing Selenium suite execution; AWS/Kubernetes test-environment coordination

RELEVANT QA AND LEADERSHIP EXPERIENCE

Lavu Inc. | Albuquerque, NM | Oct 2017 - Feb 2020

Software QA Analyst: Dec 2019 - Feb 2020; **Technical Support Lead:** promoted 2018; began in Tier 1 Support. Leadership and triage responsibilities continued through QA.

- Led QA for Inventory 2.0; designed manual tests and executed smoke, regression, integration, and end-to-end testing across development and staging environments.
- Executed existing automated suites maintained by the automation engineer; investigated failures and supplied reproducible defects and validation results.
- Validated APIs with Postman and data with MySQL queries; identified input-validation issues, security vulnerabilities, and database corruption in test environments.
- Built iOS/iPadOS applications in Xcode and tested locally and through TestFlight, including customer-facing and administrative web integrations.
- Wrote SQL reporting queries and tested proposed payment/reporting fixes against development data before submitting changes for production application.
- Reviewed changes and QA results in Bitbucket; contributed to merge and release-readiness decisions and coordinated PR-specific test environments with DevOps.
- Provided technical leadership for 35+ agents across shifts, trained hundreds of agents, and wrote more than 100 process documents; handled escalations, coaching, evaluations, and defect triage.

Nathan Martinez | Projects and Additional Experience

RECENT ENGINEERING PROJECTS

Bun Burner | TypeScript Developer Tooling | Active public beta

- Built source-preserving, bidirectional file synchronization over Bitburner's WebSocket Remote API, with conflict handling, recovery copies, and conservative failure behavior.
- Authored unit and integration tests for synchronization, hashing, paths, conflicts, recovery, and errors; simulated game-endpoint tests and Linux/Windows CI checks complement separate live Steam validation.
- CLI and npm packaging work is in progress; registry publication is pending and a VS Code extension is planned. github.com/NathanMartinez/bun-burner

Chora | Open-Source Android TV Contributions | Oct 2026 - Present

- Three merged upstream PRs: initialized the replacement Navidrome provider before registration (#116), enabled existing debug-build validation for pull requests (#118), and added playlist-deletion confirmation that handles held remote input (#121).
- Validated artwork, FLAC playback, and lyrics on physical Fire TV; tested confirmation navigation, cancellation, and deletion on emulator and physical hardware. github.com/CraftWorksMC/Chora

Private MCP Integrations and Fedora Homelab | Personal projects

- Built two personal MCP integrations using Cloudflare Workers and API adapters. Moltbook Bridge includes owner-restricted authentication, input validation, secret redaction, and automated contract and failure-path tests. Write-path tests use mocks; live checks were read-only.
- Hands-on Fedora/Linux, Podman, systemd Quadlet, networking, and infrastructure automation work. Homelab configuration and deployment workflows are being reworked; integrations remain private personal deployments.

ADDITIONAL PROFESSIONAL EXPERIENCE

Lead Repair Technician | CPR Cell Phone Repair | Albuquerque, NM
May 2024 - Mar 2026

- Diagnosed hardware, OS, firmware, and connectivity failures; performed recovery work and verified devices after repairs. Created troubleshooting procedures and coached technicians on consistent quality checks.

Computer Hardware Technician | HP Inc. | Rio Rancho, NM
Jan 2022 - Oct 2022

- Troubleshot enterprise workstation hardware, firmware, and software for corporate and government customers; documented findings and resolution steps.

Help Desk Specialist III | The Downs Racetrack and Casino | Albuquerque, NM
Oct 2021 - Mar 2022

- Supported Active Directory, Windows Server, Red Hat Linux, and VMware; investigated POS, email, endpoint, and connectivity issues. Used PowerShell for VM storage cleanup and scheduled backups; restored files, applied patches, and reviewed security policies.

EDUCATION AND CREDENTIALS

GED - Central New Mexico Community College
Apple device service training and certifications - Mac, iPhone, and iPad
WISE Specialist Level 1 for Smartphones and Tablets - Oct 24, 2025
