Nathan Martinez

Software QA and Test Automation

Albuquerque, NM | (505) 355-8000 | natemtztech@gmail.com

github.com/NathanMartinez | natemtz.dev

Professional Summary

Software QA professional and developer with experience testing POS, inventory, payment, API, and database workflows. Led QA for Lavu Inventory 2.0, investigated integration defects, and contributed to release readiness decisions. Authors automated tests for a public TypeScript project and brings a technical support background in reproducible troubleshooting and cross-team defect resolution.

Technical Skills

Testing: manual test design, regression, smoke, integration, end-to-end, API and database testing, defect triage, release validation

Development and tools: TypeScript, JavaScript, Bun test runner, SQL/MySQL, Postman, Git, Bitbucket, Jira, Confluence, Xcode, TestFlight

Environments: Windows, Linux, macOS, iOS/iPadOS; existing Selenium test-suite execution; AWS/Kubernetes test-environment coordination

Selected Automation Project

Bun Burner | Public beta | github.com/NathanMartinez/bun-burner

- Built a Bun/TypeScript and WebSocket integration for bidirectional Bitburner file synchronization, preserving JavaScript, TypeScript, JSX, and TSX source without a build step.
- Authored automated tests with Bun's built-in runner covering synchronization, hashing, conflicts, recovery, path validation, exceptions, and error handling.
- Tested WebSocket behavior with a simulated game endpoint; added Linux and Windows CI jobs for tests and type checking.

Relevant QA and Leadership Experience

Lavu Inc. | Albuquerque, NM | Oct 2017 – Feb 2020

Software QA Analyst: Dec 2019 – Feb 2020; Technical Support Lead: promoted 2018; began in Tier 1 Support. Leadership and triage responsibilities continued through QA.

- Led QA for Inventory 2.0; created manual tests and executed smoke, regression, integration, and end-to-end testing across development and staging environments.
- Executed existing automated test suites maintained by the automation engineer; investigated failures and supplied reproducible defects and validation results.
- Validated APIs with Postman and data with MySQL queries; identified input-validation issues, security vulnerabilities, and database corruption in test environments.
- Built iOS/iPadOS applications in Xcode and tested locally and through TestFlight, including customer-facing and administrative web integrations.
- Wrote SQL reporting queries and tested proposed payment/reporting fixes against development data before submitting changes for production application.
- Reviewed changes and QA results in Bitbucket; contributed to merge and release-readiness decisions. Coordinated PR-specific test environments with DevOps through Slack integrations.

Leadership and Additional Professional Experience

Lavu Technical Support Leadership

- Provided technical leadership for 35+ agents across shifts, trained hundreds of agents, and wrote more than 100 process documents.
- Handled escalations, coaching, evaluations, and defect triage; collaborated with product, engineering, release, onboarding, and implementation teams.

Lead Repair Technician | CPR Cell Phone Repair | Albuquerque, NM

Mar 2024 – May 2026

- Diagnosed hardware, OS, firmware, and connectivity failures; performed recovery work and verified device functionality after repairs.
- Created troubleshooting procedures and workarounds, coached technicians, and supported consistent repair quality checks.

Computer Hardware Technician | HP Inc. | Rio Rancho, NM

Jan 2022 – Oct 2022

- Troubleshot enterprise workstation hardware, firmware, and software for corporate and government customers; documented findings and resolution steps.

Help Desk Specialist III | The Downs Racetrack and Casino | Albuquerque, NM

Oct 2021 – Mar 2022

- Supported Active Directory, Windows Server, Red Hat Linux, and VMware environments; investigated POS, email, endpoint, and connectivity issues.
- Used PowerShell for VM storage cleanup and scheduled backup operations; restored deleted files, applied OS patches, and reviewed security policies.

Additional Development Projects

Nonprofit Workflow Tools

- Built tools used by a nonprofit office to generate printable schedules from existing meeting data and simplify purchase-order entry and reconciliation through an existing QuickBooks integration.

Web Applications

- Built a Node.js, Express, and Socket.IO real-time chat application; created a Svelte application using GraphQL queries, filtering, and pagination.

Education and Credentials

GED

Apple device service training and certifications — Mac, iPhone, and iPad

WISE Specialist Level 1 for Smartphones and Tablets — Oct 24, 2025
